Siyanbola Adeola Olaoluwa

Full-Stack Developer · React · Node.js · MongoDB

Ogbomoso, Oyo State, Nigeria (WAT, UTC+1) | Siyanbolaolaoluwa92@gmail.com | +234 703 832 4462
GitHub: github.com/ShimboJr | Portfolio: shimbojr-portfolio.vercel.app | LinkedIn: linkedin.com/in/shimbojr

PROFESSIONAL SUMMARY

Full-stack developer who designs, builds and deploys complete web applications: React frontends, Node.js/Express APIs and MongoDB databases. Four projects live in production, with hands-on experience in authentication and role-based access, real-time features, security hardening, automated testing and CI, and production debugging, including cutting a MongoDB Atlas connection overload from 100+ to about 5–10 connections. Self-directed and remote-ready.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), HTML5, CSS3, Python
Frontend	React, Bootstrap 5, Chart.js, Progressive Web Apps (service workers, installable apps)
Backend	Node.js, Express.js, REST API design, Server-Sent Events, Web Push, authentication (JWT, Google sign-in), role-based access control, file and media uploads, CSV import/export
Databases	MongoDB (Atlas), Mongoose, TTL indexes, connection pooling; PostgreSQL (foundational); SQLite
Security & Testing	argon2id password hashing, CSRF protection, rate limiting, input validation (Zod), NoSQL-injection sanitization; Jest, pytest
Tools & Deployment	Git/GitHub, GitHub Actions (CI), Docker, Vercel, Render, production debugging, technical documentation

PROJECTS

CivicFix — Community Issue Reporting Platform

React · Node.js/Express · MongoDB

Live: sjrcivicfix.vercel.app

- Designed and deployed a full MERN-stack platform with three role-based user types (Resident, Administrator, Staff/Resolver) covering issue submission, assignment and resolution, plus an emergency incident subsystem accepting photo and short-video (15 s max) evidence.
- Diagnosed MongoDB Atlas connection-limit warnings (100+ concurrent connections) and fixed them with Mongoose connection pooling (maxPoolSize 10, minPoolSize 5), graceful shutdown and retry logic, stabilizing usage at 5–10 connections.
- Built live location sharing that sends periodic updates to an admin monitoring map via polling; traced and fixed silent update failures caused by slow first GPS fixes and race conditions in client state handling.

VoltWatch — Laptop Battery Monitoring & Alerting System

Node.js · Express · MongoDB · Python · PWA

Live: sjrvoltwatch.vercel.app · **Code:** github.com/ShimboJr/VoltWatch

- Built a three-part system end to end: a Python Windows tray agent, a Node.js/Express/MongoDB backend deployed with Docker on Render, and an installable PWA dashboard on Vercel with live updates over Server-Sent Events and Web Push alerts.
- Designed a pure-function alert engine (8 alert types, deduplicated with unique keys) and background jobs that detect a silent laptop within 3 minutes and repeat critical alerts every 5 minutes until acknowledged.
- Made the data pipeline reliable: an offline SQLite queue with exponential back-off and jitter, idempotent readings, clock-skew rejection, and MongoDB TTL indexes with hourly rollups.
- Hardened security and quality: hashed device tokens, argon2id passwords, JWT sessions in httpOnly cookies, CSRF protection, rate limiting, Zod validation, backed by Jest and pytest suites and a GitHub Actions CI pipeline with an end-to-end simulator test.

Tradiary — Trading Journal Web App

MongoDB · Express · React · Node.js

Live: tradairy.vercel.app

- Built and deployed a free, full-stack trading journal with Google sign-in and email/password authentication, CSV import/export, and a filterable, paginated trade history across multiple trading accounts.
- Built a performance analytics dashboard (net P&L, win rate, profit factor, expectancy in R, max drawdown, equity curve) with period filters and comparison, plus a daily P&L calendar with weekly totals.
- Added a daily journal with mood-vs-P&L analysis, goal tracking, playbooks, mistake tracking, a watchlist, and position-size and R-multiple risk calculators.

SJrMusic — Music Streaming Platform

REST API · JavaScript

Live: sjrmusic.vercel.app

- Built a music streaming platform with its own hosted REST API serving track data, and a web client with search and filtering by title, artist and album, alphabetical sorting, and in-browser audio playback and download.

EDUCATION & TRAINING

Bachelor of Technology (B.Tech) — 2022 – Present
Ladoke Akintola University of Technology (LAUTECH), Ogbomoso, Oyo State, Nigeria

Full-Stack Web Development Training — 2026 – Present
SQI College of ICT — completed the MERN-stack curriculum; training ongoing

LANGUAGES

English — fluent (written and spoken)
